

## SuperPro Marketing Notes    SPF2575K, SPF2576K & SPF2577-\_\_K VAG Golf MKIV Platform Cars Lower Engine Support Bracket Front & Rear” Mounting Bush Kit

On standard vehicles the original bushings compress and extend to allow the engine to move during acceleration and braking. In some high-performance applications with increased engine output, or in more standard cars with worn original bushings, this movement can be excessive. The SuperPro bushings improve the compression and extension forces. Reducing engine movement under acceleration and braking reduces torque steer whilst improving the feedback to the driver.

### Models covered:

Audi - A3 & S3 (Golf Mk4 Chassis), TT Coupe 1997-04 (2WD & 4WD).  
Seat - Cordoba, Leon & Toledo (Golf Mk4 Chassis) – 2WD & 4WD  
Skoda – Octavia (Golf MK4 Chassis)  
Volkswagen - Beetle, Bora & Golf MK4 (2WD & 4WD)

### SPF2576K – Lower Engine Steady Front Bush Kit

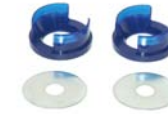

Fits to OEM bracket 1J0199851N. Designed with modified petrol engines in mind, SuperPro have developed a bush to cope with the high power and torque generated by these engines. This bush minimises engine movement (Improves lateral location by 24% over the original bushing) under acceleration making the car more responsive and more positive to drive. This kit includes 1 bush, 1 tube, 2 washers and assembly grease.

### SPF2575K – Lower Engine Steady Front bush Insert Kit

Fits to OEM bracket 1J0199851N. This fantastic little product is what we call a void filling insert. The standard engine steady bush has casting holes left in it, these inserts from SuperPro have been designed to snugly fit into these holes minimising engine flex under acceleration. (Improves lateral location by 17% over the voided original bushing)

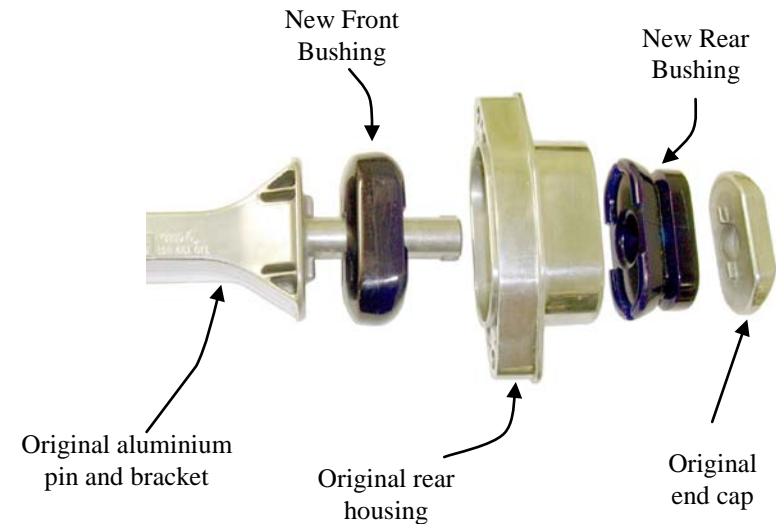

This greatly improves engine response, without causing harsh vibrations which other Polyurethane manufacturer’s products can do. This kit includes 2 inserts and 2 washers and is ideal for Diesel and standard Petrol models.

### SPF2577-\_\_K – Lower Engine Steady Rear Bush Kit

Fits to OEM bracket 1J0199851N. SuperPro produce this bush in a range of material hardness to offer the best compromise between performance improvement and driver comfort. Different engine specifications can result in more engine movement, or more vibration transmission through the steering wheel and pedal box. Particularly a problem with Diesel models, SuperPro has designed this bush in three different materials to minimise this problem. The kit includes 2 bushes and assembly grease. The three variations are:

- SPF2577-70K (Diesel applications)
- SPF2577-80K (Sports and Street applications)
- SPF2577-90K (Competition applications only)

### Ordering Notes:

For a Diesel Engine, SuperPro recommend that you use 1 x SPF2575K (Insert) and 1 x SPF2577-70K.

For standard specification Petrol engine, SuperPro recommend that you use 1 x SPF2575K (Insert) and 1 x SPF2577-80K

For Performance ‘Standard’ petrol engines, including fast road use, SuperPro recommend that you use 1 x SPF2576K & 1 x SPF2577-80K

For highly tuned or competition engines, SuperPro recommend that you use 1 x SPF2576K & 1 x SPF2577-90K.

The kits are also covered by SuperPro’s unique 3 Year/60,000km (36,000 Mile) warranty unless used for Motorsport.
